

The Wrong Door

These are new words to practice.

Say each word 10 times.

* contestant

* odds

* participating

* probability

* host

* offers

* assure

* exchange

Before or after reading the story, write one sentence that contains at least one new word.

The Wrong Door

You have been picked to be a contestant. A contestant is a person who takes part in a contest. You are participating, or taking part, in a game show. You are participating in a contest where the prize is one million dollars. Your host, or the person who has invited you as a guest on the show, shows you three identical doors. It is guaranteed, or assured, that the prize is behind one of the three identical doors.

You are very happy to be a participant, and you choose one of the doors. How assured are you of success? You cannot be assured of success, but you can figure out your odds, or chances. The probability, or likelihood, of your being correct is one in three. The odds of you having chosen the correct door are one in three. You inform your host of your decision, but then something happens.

Your host opens up one of the other two doors. You are happy to see that the prize is not behind the opened door. You still have a chance to win the million dollars. Your host offers, or puts forward, a possible exchange. An exchange is when one thing is traded for another. You can exchange your door for the other unopened door. Should you switch? Should you take your host up on his exchange offer?

Most contestants do not. This is because they think the chances of both unopened doors being correct are the same. They think the probability is even. The truth is that one has a better chance of winning the million dollars if one switches doors! How can this be?

If you switched, the only way you could lose was to have picked the door with the prize behind it at the beginning. But remember that with your first choice, the probability of being correct was one in three. This meant that the probability that you were wrong was greater. The odds of being wrong were two in three. If you exchange doors, you are betting that your first guess was wrong—which it probably was!

The Wrong Door

After reading the story, answer the questions.
Fill in the circle next to the correct answer.

1. This story is mainly about
 - (a) a host and an open door.
 - (b) a one-million-dollar prize.
 - (c) a game show and probability.
 - (d) a contestant and a participant.

2. From the story, you can tell that
 - (a) sometimes you increase your chance of winning by changing your answer.
 - (b) you can never increase your chance of winning by changing your answer.
 - (c) you can never win in a game where you can change your answer more than once.
 - (d) your chance of winning always stays the same no matter what answer you choose.

3. Tanya _____ the smaller bike for a bigger one.
 - (a) assured
 - (b) exchanged
 - (c) guaranteed
 - (d) participated

4. When you toss a coin in the air, the probability of it coming down heads is
 - (a) less than the probability of it landing on tails.
 - (b) the same as the probability of it landing on tails.
 - (c) greater than the probability of it landing on tails.
 - (d) two in three the probability of it landing on tails.

5. Think about how the word *contestant* relates to *contest*. What two words relate in the same way?

contestant : contest

 - (a) racer : race
 - (b) biker : bike
 - (c) swimmer : swim
 - (d) driver : drive
